Exercise 16.3 Q8: Three coins are tossed once. Find the probability of getting:

(i) 3 heads
(ii) 2 heads
(iii) atleast 2 heads
(iv) atmost 2 heads
(v) no head
(vi) 3 tails
(vii) exactly two tails
(viii) no tail
(ix) atmost two tails

S.No.	Event	Description
1	Pr(Y = 3)	3 Heads
2	Pr(Y = 2)	2 Heads
3	Pr(Y ≥ 2)	Atleast 2 Heads
4	Pr(Y ≤ 2)	Atmost 2 Heads
5	Pr(Y = 0)	No head
6	Pr(Y = 0)	3 Tails
7	Pr(Y = 1)	Exactly 2 Tails
8	Pr(Y = 3)	No Tail
9	Pr(Y ≥ 1)	Atmost 2 Tails

TABLE 1

Solution: Let the Bernoulli random variable $X \in \{0, 1\}$ where $X = 0$ denotes occurrence of head(success) and $X = 1$ denotes occurrence of tail(failure) for a single coin toss. For a fair coin,

$$\Pr(X = 0) = p = \frac{1}{2} \tag{1}$$

$$\Pr(X = 1) = q = \frac{1}{2} \tag{2}$$

Let the Binomial random variable $Y \in \{0, 1, 2, 3\}$ denote the number of heads. We can express this as a binomial distribution,

$$\Pr(Y = k) = {}^{n}C_k(\mathsf{p})^k(\mathsf{q})^{n-k} \tag{3}$$

where $k \in \{0, 1, 2, 3\}$ and n = 3 for 3 coins. By (1) and (2),

$$\Pr(Y = k) = {}^{3}C_k\left(\frac{1}{2}\right)^k\left(\frac{1}{2}\right)^{3-k} \tag{4}$$

From Table 1,

(i) 3 heads:

$$\Pr(Y = 3) = {}^{3}C_3\left(\frac{1}{2}\right)^3\left(\frac{1}{2}\right)^0 \tag{5}$$

$$= \frac{1}{8} \tag{6}$$

(ii) 2 heads:

$$\Pr(Y = 2) = {}^{3}C_2\left(\frac{1}{2}\right)^2\left(\frac{1}{2}\right)^1 \tag{7}$$

$$= \frac{3}{8} \tag{8}$$

(iii) atleast 2 heads:

$$\Pr(Y \geq 2) = \Pr(Y = 2) + \Pr(Y = 3) \tag{9}$$

$$= {}^{3}C_3\left(\frac{1}{2}\right)^3 + {}^{3}C_2\left(\frac{1}{2}\right)^3 \tag{10}$$

$$= \frac{1}{2} \tag{11}$$

(iv) atmost 2 heads:
$$\Pr(Y \leq 2)$$
$$= \Pr(Y = 2) + \Pr(Y = 1) + \Pr(Y = 0) \tag{12}$$

$$= {}^{3}C_2\left(\frac{1}{2}\right)^3 + {}^{3}C_1\left(\frac{1}{2}\right)^3 + {}^{3}C_0\left(\frac{1}{2}\right)^3 \tag{13}$$

$$= \frac{7}{8} \tag{14}$$

(v) no head:

$$\Pr(Y = 0) = {}^3C_0 \left(\frac{1}{2}\right)^0 \left(\frac{1}{2}\right)^3 \qquad (15)$$

$$= \frac{1}{8} \qquad (16)$$

(vi) 3 tails:

$$\Pr(Y = 0) = {}^3C_0 \left(\frac{1}{2}\right)^0 \left(\frac{1}{2}\right)^3 \qquad (17)$$

$$= \frac{1}{8} \qquad (18)$$

(vii) exactly two tails:

$$\Pr(Y = 1) = {}^3C_1 \left(\frac{1}{2}\right)^1 \left(\frac{1}{2}\right)^2 \qquad (19)$$

$$= \frac{3}{8} \qquad (20)$$

(viii) no tail

$$\Pr(Y = 3) = {}^3C_3 \left(\frac{1}{2}\right)^3 \left(\frac{1}{2}\right)^0 \qquad (21)$$

$$= \frac{1}{8} \qquad (22)$$

(ix) atmost two tails:
$\Pr(Y \geq 1)$

$$= \Pr(Y = 1) + \Pr(Y = 2) + \Pr(Y = 3)$$

$$\qquad (23)$$

$$= {}^3C_1 \left(\frac{1}{2}\right)^3 + {}^3C_2 \left(\frac{1}{2}\right)^3 + {}^3C_3 \left(\frac{1}{2}\right)^3 \qquad (24)$$
$$= \frac{7}{8} \qquad (25)$$
